Attention!

This book is in no way intended to replace diagnosis and therapy control by a doctor or naturopath! Even if the results with the Diamond Shield Zapper IE EMS and its electrical frequencies are impressive - even with very serious, chronic illnesses - this is not intended as a substitute for controlled medical therapy.

The names of the programs are recommendations based on the extensive practice experience of frequency therapists and not concrete claims of effectiveness.

Deep Discharge Zap- The next generation of zapper and bioresonance technology

The Deep Discharge Zap (DDZap) is connected to a Diamond Shield Zapper and a fractal amplifier to increase the effectiveness of the zapper application. The integrated cups enable bioresonance applications with ampules by inverting the information.

The DDZap is the first to feature a completely new technology that uses a special heavy alloy to intensify the grounding in order to release loads very deep in the tissue. This has a more comprehensive effect than the usual bioresonance and also supports the effect of the Fractal Enhancer.

The chipcards specially developed for the DDZap work with the patented Harmonical Frequencies according to Baklayan.

The correct combination of chipcard and ampule set can be found in the table below.

First steps

The following simple steps will take you to an individual frequency application.

- Connect the components according to the DDZap operating instructions.

- Place ampules or materials that are loading you in the "Burden" cup
- and ampules or materials that support you into the "Support" cup.

Functions of the brass cups

Cup Support

This cup contains supporting information in the form of ampoules (marked S in the application list) or original material (e.g. food supplements)

Cup Burden

This cup contains loads in the form of ampoules (marked B in the application list) or original material (e.g. pollen from the windowsill)

Attention: the use of the glass beakers is mandatory to protect the ampoules. No ampoules without glass insert may be placed in the brass cups.

Pure substances can also be placed in the cups for support or clearing out. Packaging such as aluminum foil reduces the quality of information transfer and should be removed.

Cup Drops

Mineralvit gold vials or other carrier materials can be placed in this cup to transmit the frequency information. No glass insert is required for this brass cup.

Place a Mineralvit gold vial or another carrier substance in the "Drops" cup. This transfers the information of the current application. These individual drops can be taken 3 times 5 drops a day to supplement the application.

A separate bottle must be opened for each topic.

An opened vial can be placed back in the cup for repeated use to refresh the information or refilled beforehand. It is advisable to label the vials to keep the topics separate.

Advantages of using Mineralvit Gold

MANNAYAN MINERALVIT-GOLD contains mineral and trace elements of fossil origin.

The raw material for MANNAYAN MINERALVIT-GOLD is a humus shale that has stored the entire wealth of trace elements and minerals of primeval abundant vegetation and is around 200 million years old. These valuable minerals are extracted in a complex leaching process that is subject to strict controls to ensure the highest possible purity.

MANNAYAN MINERALVIT-GOLD drops increase the extracellular flow and thereby eliminate toxins, left-spinning valences and unfavorable left-spinning minerals. They are regarded as a true "secret weapon" against the inertia of toxically overloaded intercellular tissue.

Optional bioenergetic testing with a tapper

A separately available tapper can optionally be plugged into the connection sockets next to the "Support" or "Burden" cups to determine a need (resonance) by means of bioenergetic testing (kinesiological or using a one-handed rod).

DDZap ChipCards and ampule sets

In this explanatory table you will find the correct application combinations of chipcard and ampule set. Please place the desired ampules in the indicated cup Burden (B) or Support (S). Only ampules that fit together should be placed in the cup at the same time.

Infusing therapeutic drops is recommended.

The recommended application time depends on the number of ampules in the cup:

Recommended application time:	
1 ampule	6 min
from 4 ampules	12 min
from 7 ampules	24 min
from 10 ampules	36 min

The application can be ended manually after the specified time.

Safety note:

Every person is different. It is advisable to start with 6 minutes of running time per topic and increase this by 2 minutes every day - depending on your sensitivity.

In the event of detoxification reactions (Herxheimer reactions), stop using the zapper immediately for 1 to 3 days. Then start again with shorter periods.

DDZap ChipCards

The following chipcards are recommended for use with the DDZap:

ChipCard or program name	Sequences		Running time Min.	Area of application
BSC	2	alternating every 3 min.*	36	Bacteria, mold, candida
TMU	2	alternating every 3 min.*	36	Toxins, metals, support organs, intolerances
PVI	2	alternating every 3 min.*	36	Parasites, viruses, intracellular microorganisms
SIT	2	alternating every 3 min.	36	specific immune system, thymus, T lymphocytes
MEB	2	alternating every 3 min.*	36	Meridians, bioenergetic blockades, radioactivity
ANA	2	alternating every 3 min.*	36	Allergies, food allergies, hypersensitivities
IAL**	12	3 minutes each*	36	clear out vaccinations, allopathics, chemotherapy*

*The chipcard *automatically changes* frequency every 3 minutes.

**The application of the chipcard IAL is very strong! A duration of 3 minutes on the first day and an increase of 3 minutes on each subsequent day of application is recommended. If reactions occur, pause the application immediately for 1-3 days and start again with shorter times.

DDZap ampule sets overview

Ampule set designation	Number of ampules	Area of application	compatible ChipCard	DDZap cup
IMM	10	Immune system	SIT	S
BLP	9	Blood parasites	PVI	B
BIE	7	Blockades Internal Environment	TMU	B
BEB	10	Bioenergetic Blockades	MEB	B
RAD	10	Radioactivity	MEB	B
FOO	10	Food allergies	ANA*	B
STA	7	Staphylococci	BSC	B
STR	9	Streptococci	BSC	B
IBA	10	Intestinal bacteria	BSC	B
CLS	10	Clostridia	BSC	B
CAN	10	Candida	BSC	B
YEA	6	Yeasts	BSC	B

*The ampule Allergy should lie in the cup *Burden* for all applications with the chipcard ANA. Regardless of which allergens (food, pollen, animal hair, etc.) are being treated and whether they are ampules or original substances.

Please do not bring the allergy ampule into direct contact with substances - place them in a plastic bag or a thin-walled glass container (ampule, snap lid glasses) in the glass beaker. Empty ampules with a preservative carrier liquid are available as DDZap accessories.

**For further information on the ChipCards AR, A and BB, please refer to the ChipCard compendium *Gentle Therapy with Biofrequencies - Simple effective therapy with Diamond Shield ChipCard programs*.

Attention: Do not forget the drops in the cup *Drops* and the glass inserts for the ampules!

*The ampule Allergy should lie in the cup *Burden* for all applications with the chipcard ANA. Regardless of which allergens (food, pollen, animal hair, etc.) are being treated and whether they are ampules or original substances.

Please do not bring the allergy ampule into direct contact with substances - place them in a plastic bag or a thin-walled glass container (ampule, snap lid glasses) in the glass beaker. Empty ampules with a preservative carrier liquid are available as DDZap accessories.

**For further information on the ChipCards AR, A and BB, please refer to the ChipCard compendium *Gentle Therapy with Biofrequencies - Simple effective therapy with Diamond Shield ChipCard programs*.

Attention: Do not forget the drops in the cup *Drops* and the glass inserts for the ampules!

Flanking measures

Some important points must be observed for successful use with the DDZap.

- It is essential that you drink enough pure still **water** during and after the therapy. Mineral water, tea and juices do not count. You need 2 to 3 liters of water a day to bind the toxins and waste products released by the therapy and excrete them via the kidneys. If you drink too little, you can expect significant reactions! Ideally, you should drink very high-resistance water such as Plöse or water filtered by a reverse osmosis system.
- Regular **bowel movements** are also a prerequisite for the DDZap application. If constipation persists, toxins and waste products remain in the body and can trigger very unpleasant reactions or even worsen the symptoms. Intestinal activity must therefore be consistently supported. This includes building up the intestinal flora with probiotics (e.g. Mannayan Flor, Colo+), stimulating peristalsis with e.g. Mannayan Colovital, PABA+ or Cascara Sagrada. Enemas also support the therapy, and colon hydrotherapy can help with persistent problems.
- It is essential that the excretory pathways are clear, especially for detoxifications such as **heavy metal elimination**. This affects not only the kidneys and intestines, but also the skin, lymph and respiratory tract. Regular exercise is therefore necessary - 2 to 3 times a week until you break out in a pleasant sweat.
- Skin care and cosmetics **containing kerosene** not only hinder detoxication via the skin, they also make the acupuncture points difficult to test for EAV testing and can reduce conductivity via the hand electrodes. Very thorough hand washing to remove cream residues is recommended.

- The effectiveness of the therapy is increased if you drink plenty of high-octane water immediately after the DDZap application and avoid **stimulants** such as coffee, black tea, alcohol and cigarettes.
- To allow the subtle energies of the therapy to take effect, it is advisable not to take a bath or shower for about 6 hours. However, a **shower** after 6 hours is beneficial as water has a draining effect.

Drinking behavior

Regular detoxication is a basic requirement for the body to be able to maintain its countless vital functions. In turn, this natural detoxication can only take place if the body is supplied with a sufficient amount of water every day.

Only so-called "unbound" water fulfills the requirement that waste products can be bound and thus excreted via the body.

A water molecule that is already bound to other substances, such as minerals in the case of mineral water, has no further binding capacity in its structure and therefore cannot bind any toxins. Unfortunately, this simple connection has not yet been fully recognized, even among experts.

During treatment with a Diamond Shield device, it is absolutely necessary to drink at least two liters of still water per day, regardless of the intake of other beverages, due to the toxins that are now released. Most of the unexpected consequences of a Diamond Shield treatment are solely due to disregarding this simple rule.

Unfortunately, despite the comparatively strict drinking water regulations in comparison to other countries, our water pipes do not flow free and unbound water. This is because, as can be demonstrated by physical tests based on the measured water resistance, our tap water contains a large number of bacteria that have died off, heavy metals and environmental toxins.

From this perspective, our tap water has qualitative deficiencies. However, as already mentioned, it is essential to support a Diamond Shield therapy with a sufficient intake of high-quality water with a correspondingly high resistance value, so you should switch to water that is treated by a reverse osmosis device or to Plose spring water from the South Tyrolean Alps. This water has the highest resistance value of all available waters. Also make sure that the water is not filled in plastic bottles but in glass bottles.

The detoxification capacity of Plose water is ten to twelve times higher than that of conventional tap water. Water produced by a reverse osmosis device even measures up to 30,000 ohms. The investment in such a device will definitely pay off for a family of more people. Drink two liters a day in the long term, even if you find it difficult at first. After about 6 weeks, your body will adapt and help you to feel more vitality and joie de vivre!

- Further detoxification measures in particular for cleansing the liver are described in more detail in the book "*Parasites: The hidden cause of many diseases*".
